

ABSTRACT OF THE DISCLOSURE

A method and system are provided for facilitating interaction between a device and a device environment. The system may include a detection module for automatically detecting proximity of a participant within the device environment. The system may additionally include a user-configurable authorization module for authorizing the device to adjust a device user interface in a pre-determined manner in response to the detection of the participant. The system may also provide for sharing resources among multiple participating devices, wherein each of the multiple participating devices has a device specific set of application resources. The system may additionally include a configurable resource regulation mechanism for making the device specific application resources from the second participating device available to the first participating device.
